

Major Studio 1

PROTOTYPE 1

Rachel Gorman

Current Research Question

**Can technology take inspiration from
non-human mammalian physiologies to
enhance the human experience of rest,
comfort, and coziness?**

LAST WEEK'S FEEDBACK

- **Keep going!**
 - Branch out by experimenting with new forms and materials.
- **Reconsider the heartbeat**
 - As well as warmth and other sensorially-appealing components
- **Decide how to approach this project**
 - Am I working from a product or critical perspective?

WARMTH

Reconsider heartbeat

Lightly - warm yellow light

Mesial pockets - pouch

- Critical ← jolt awake + go
 - Puzzled to sleep come
 - Speculative (heartbeat)

WORK w/more materials

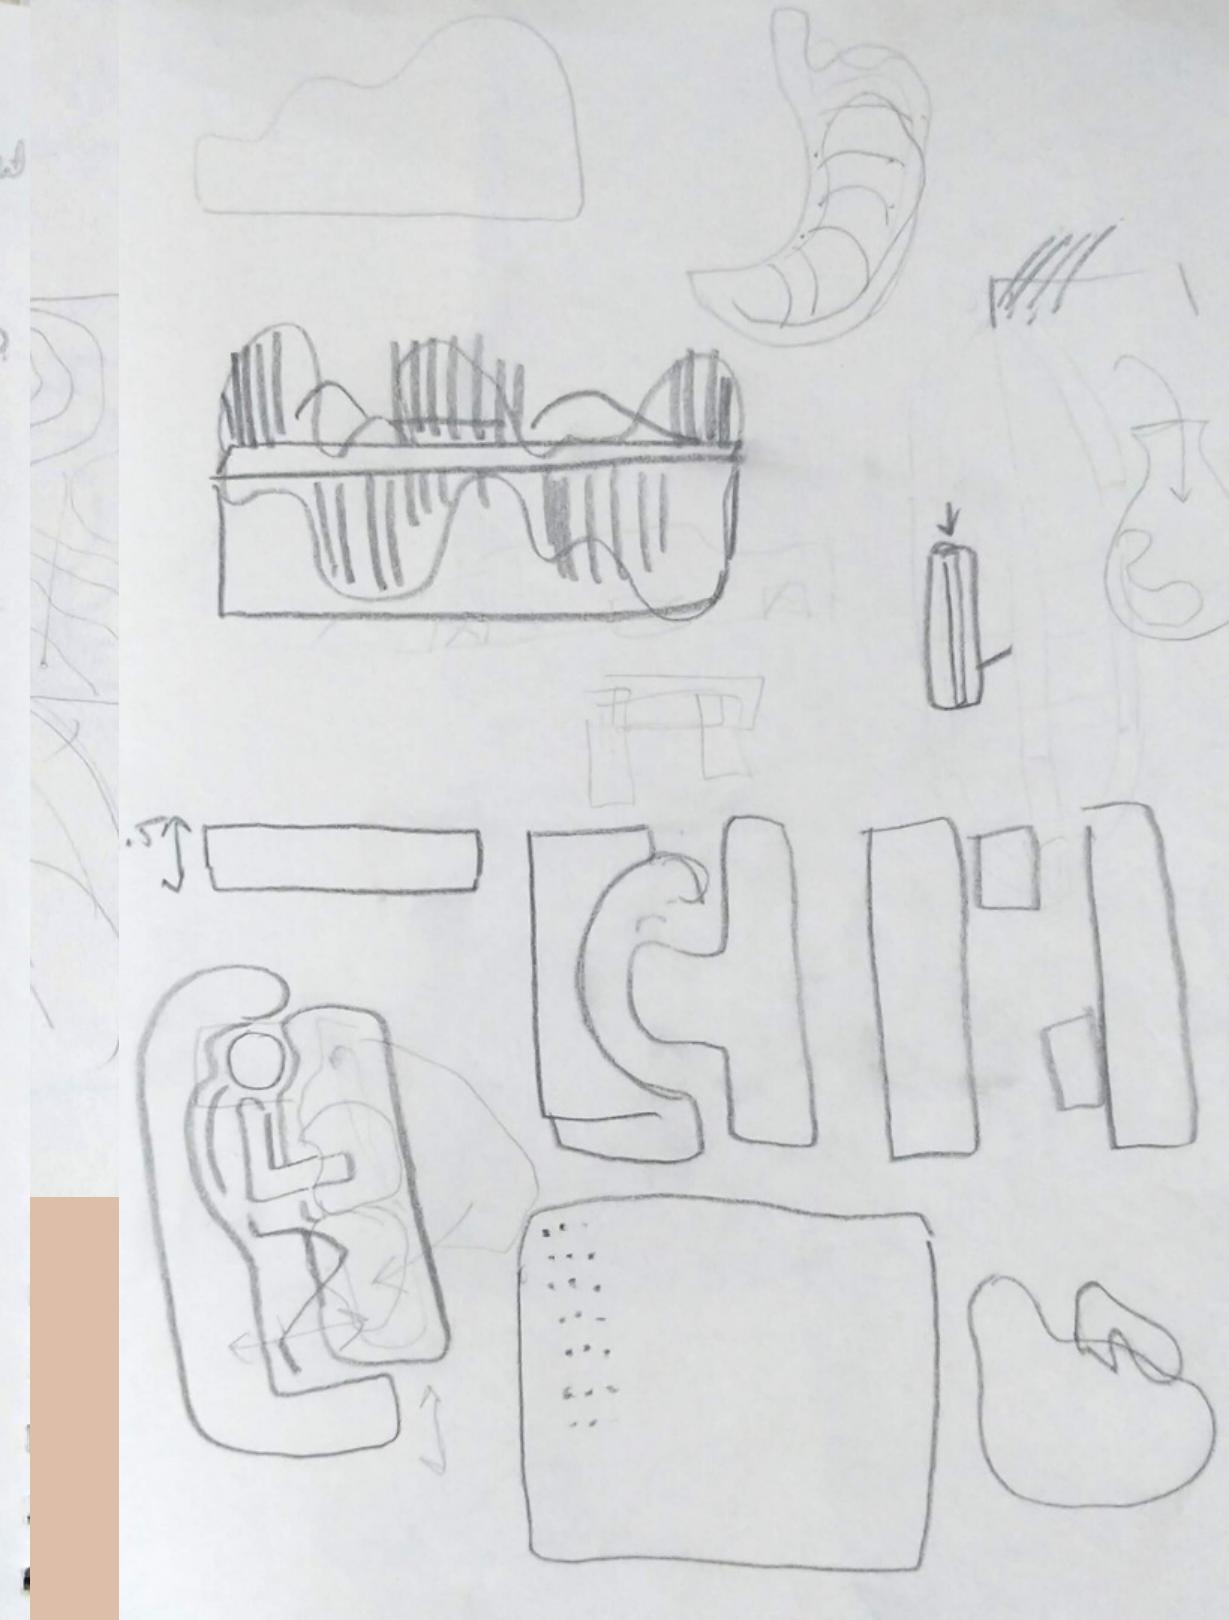

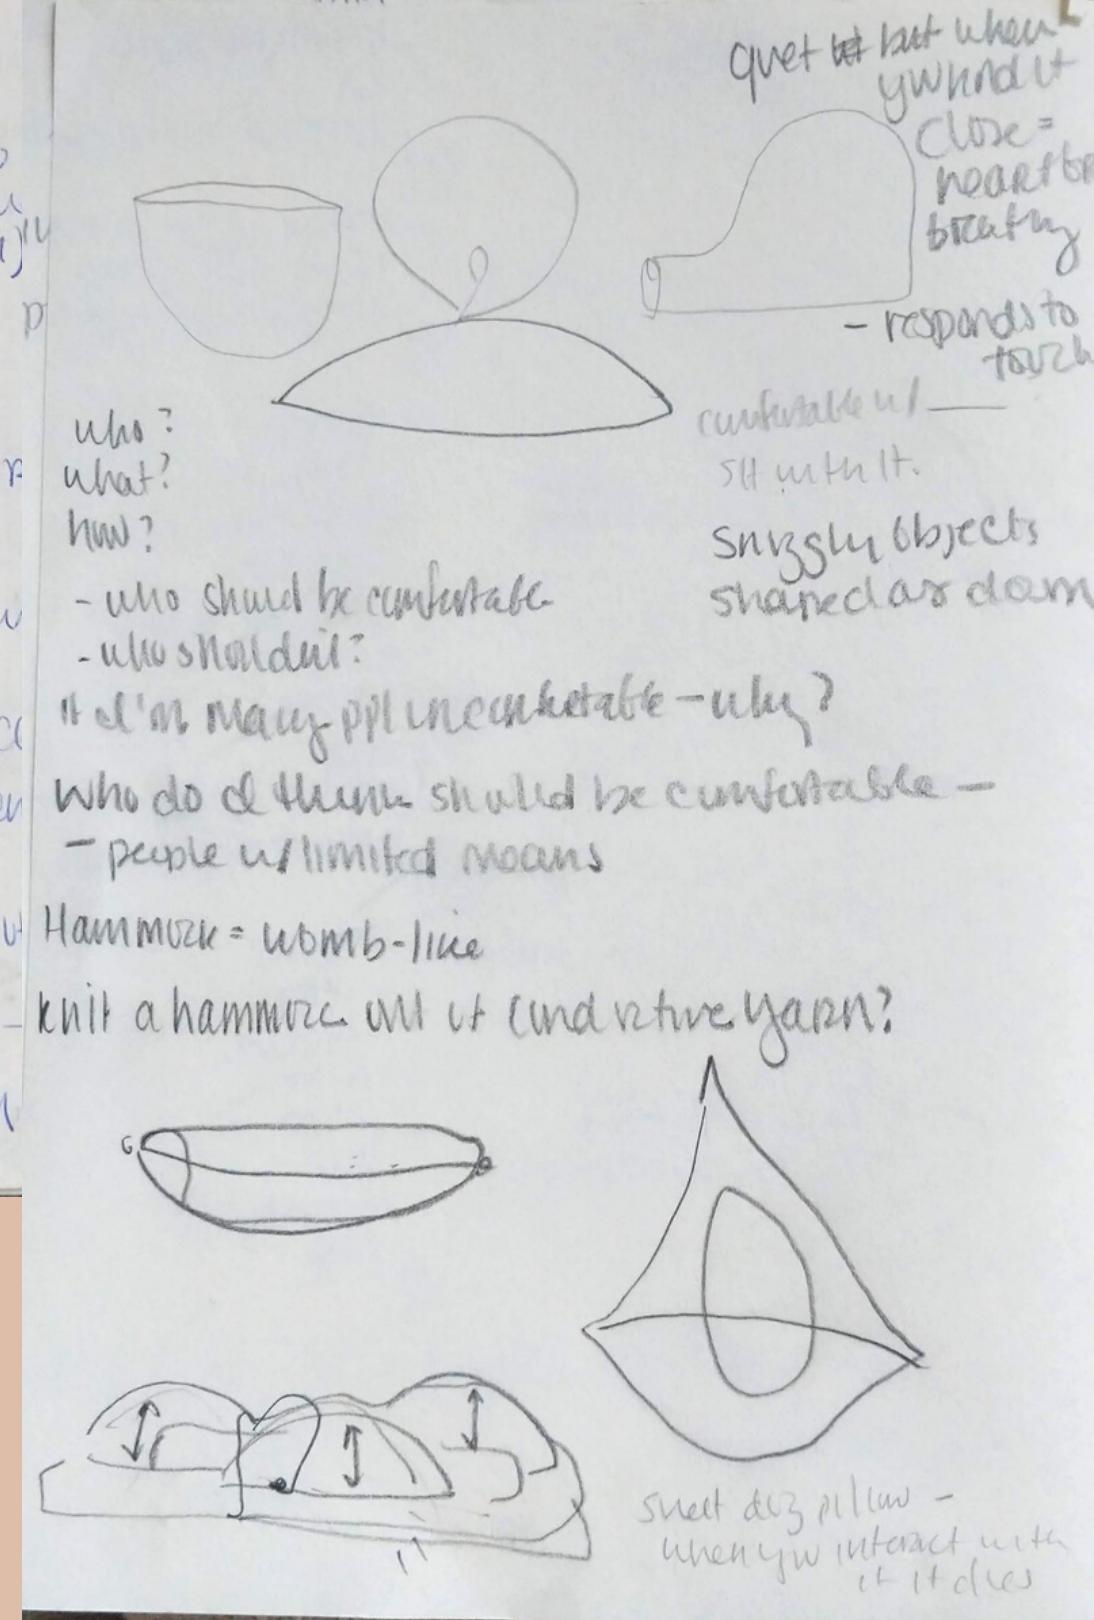

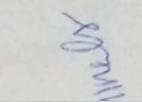

- work in form
 - change question if it r.

Belgian : transience + extensiu

- Don't have to do a lot
 - ID one small behavior in a ~~test~~ What happens when In cold, in hot, etc.

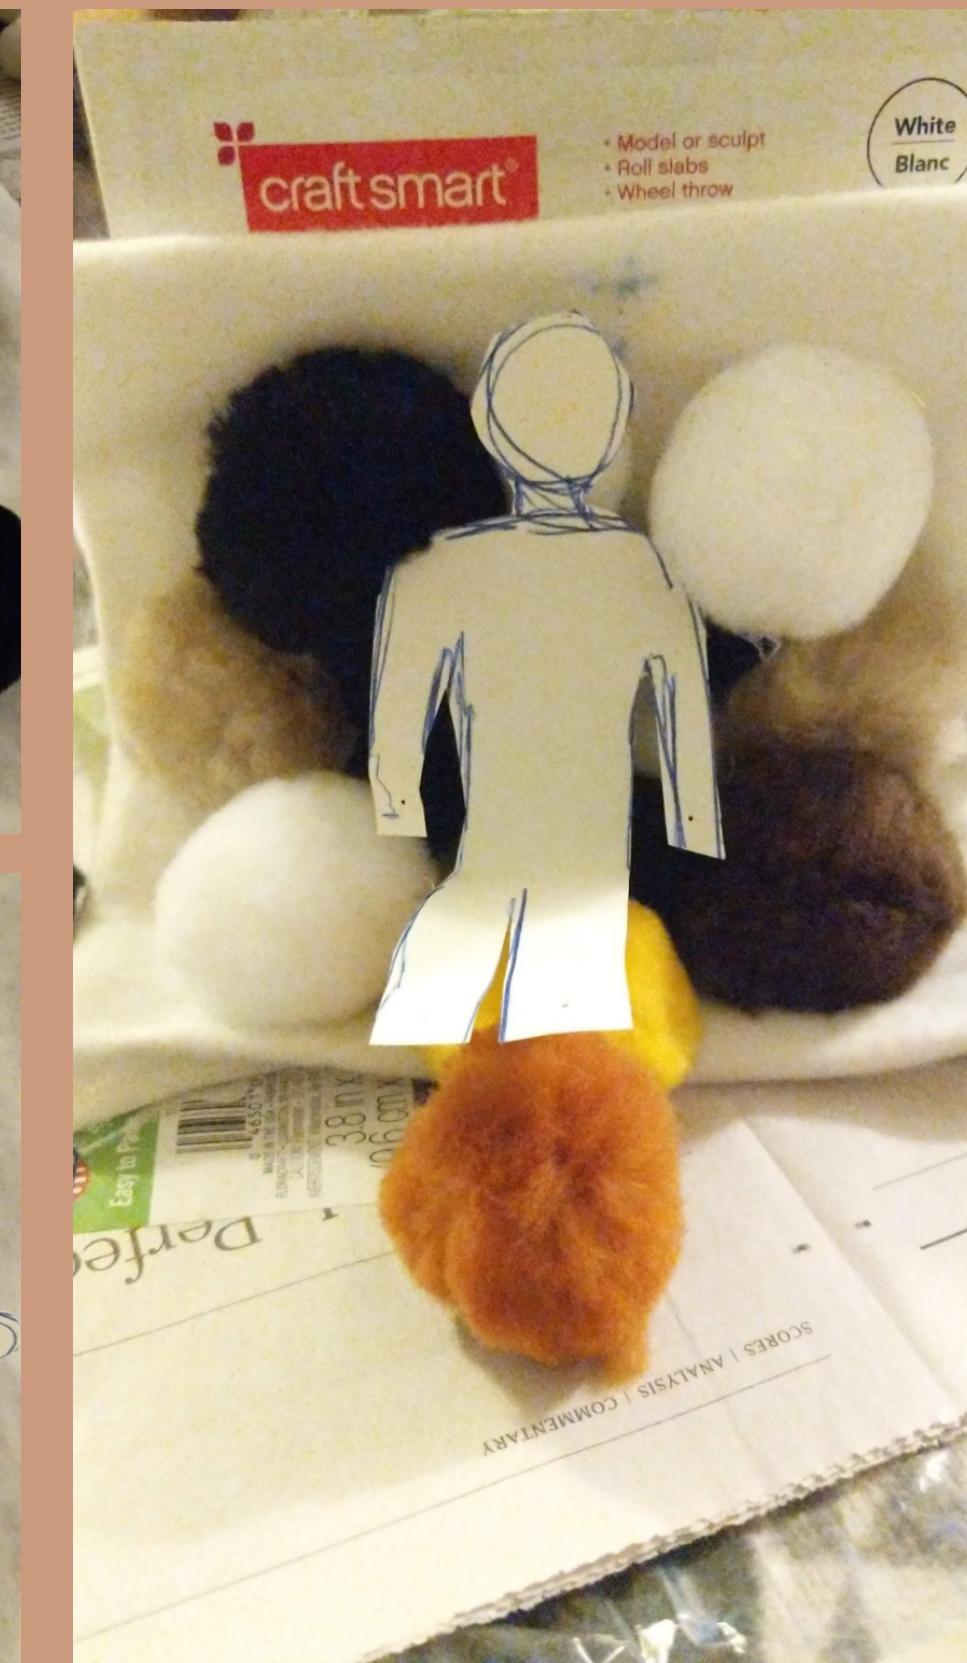

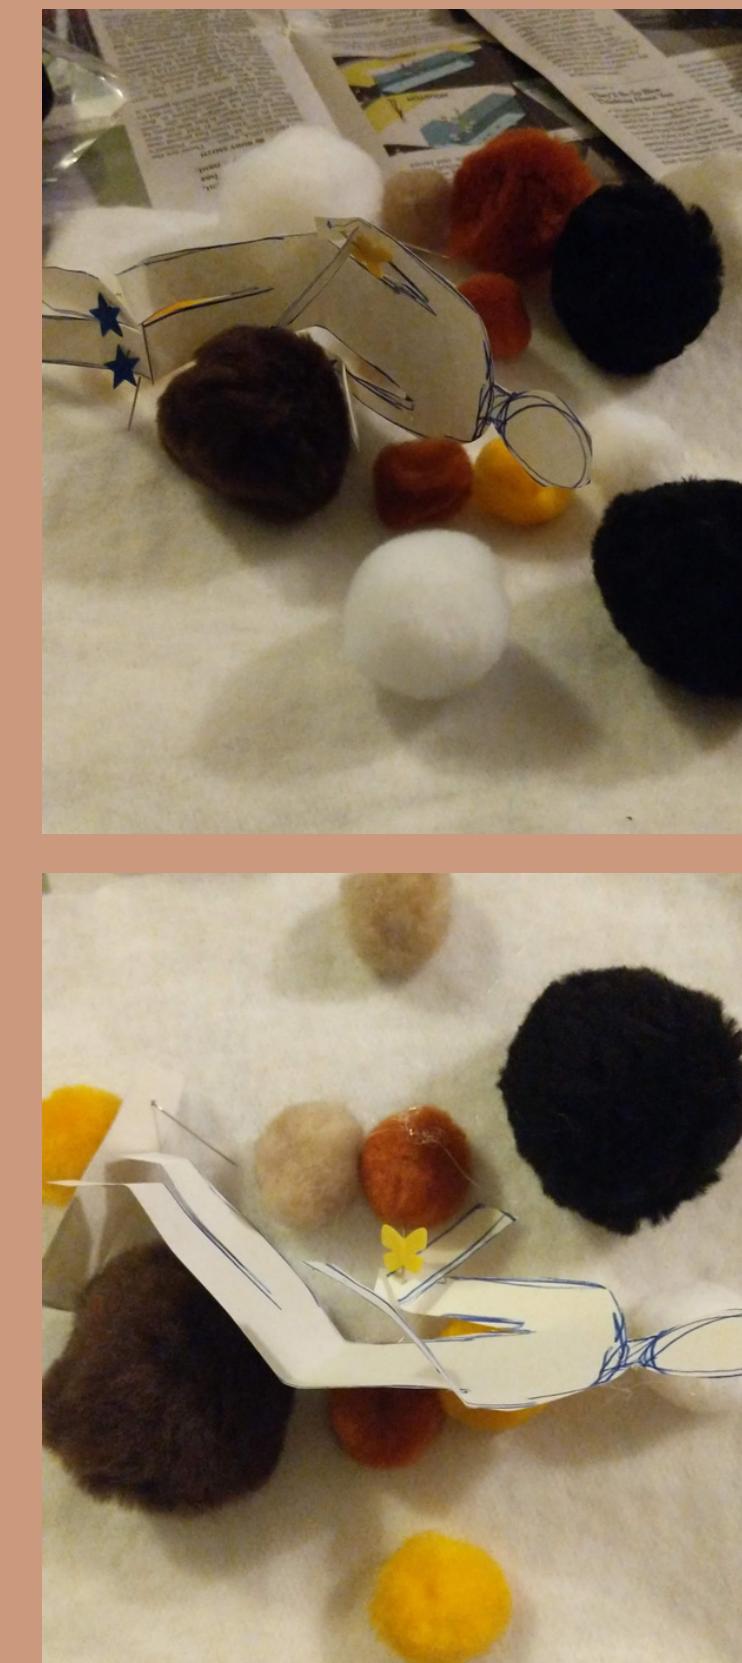

What are products w/ Hammock = womb-11

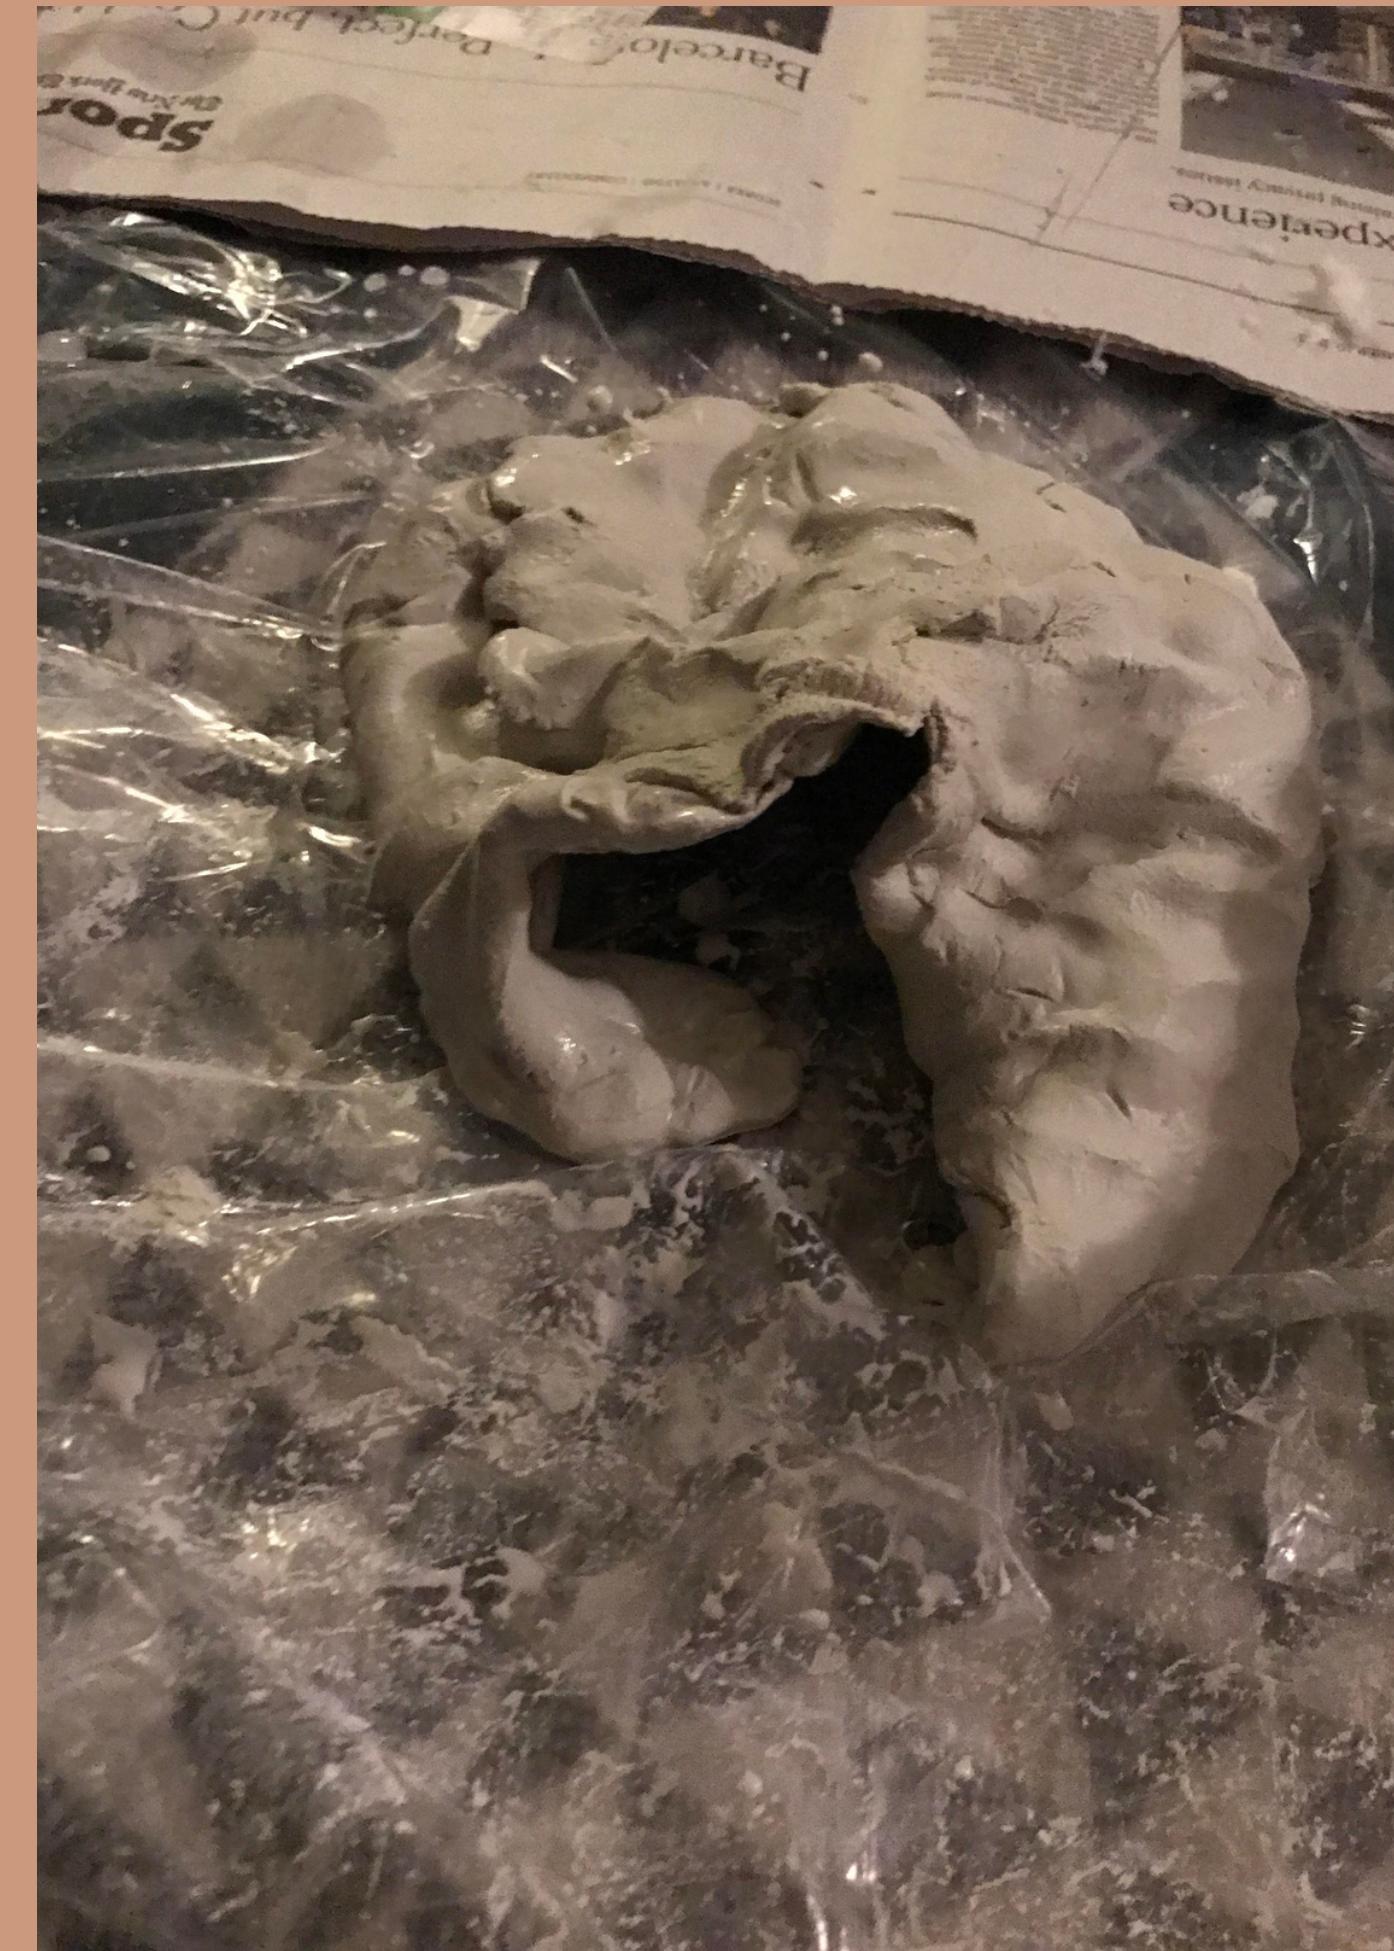

- * light beats w/ heart?
Heartbeat → heartbeat stops -
→ super-fast - maybe in away

This is a distinctly distressing time.

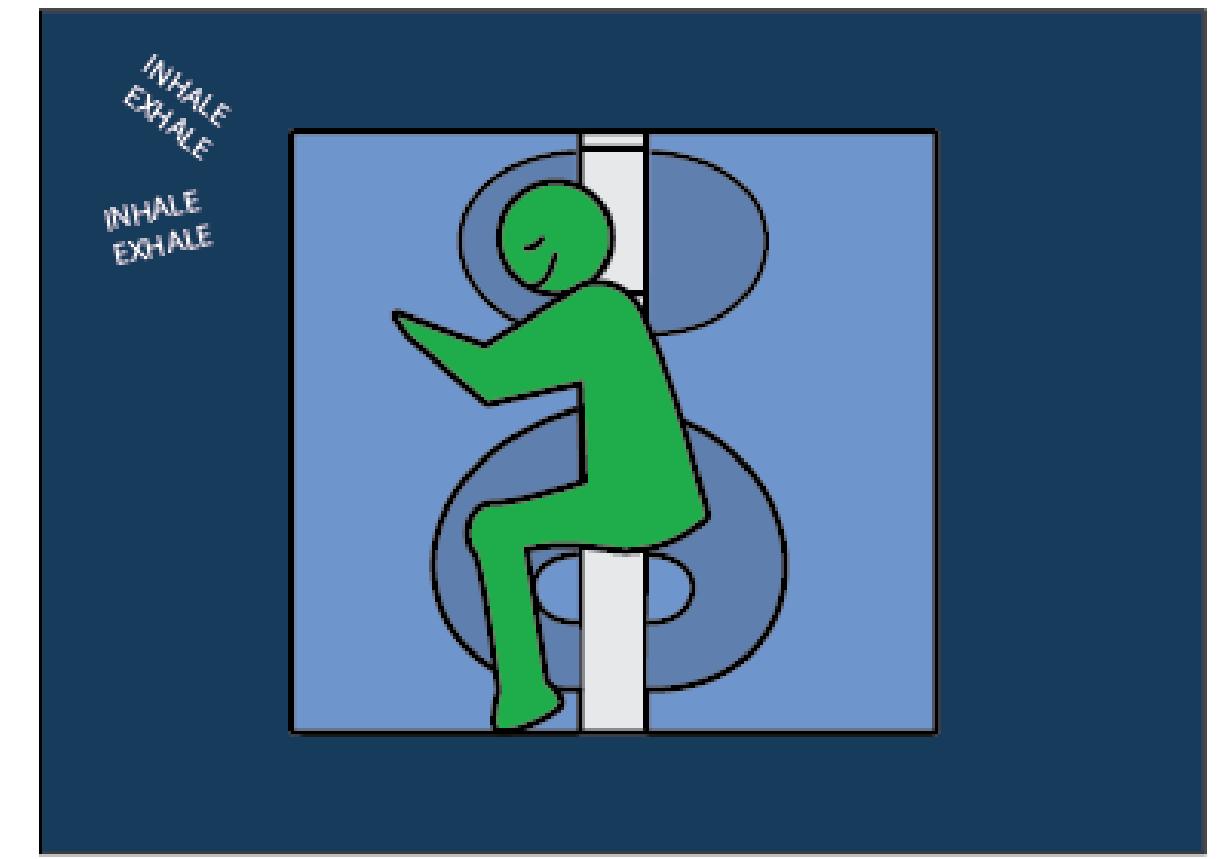

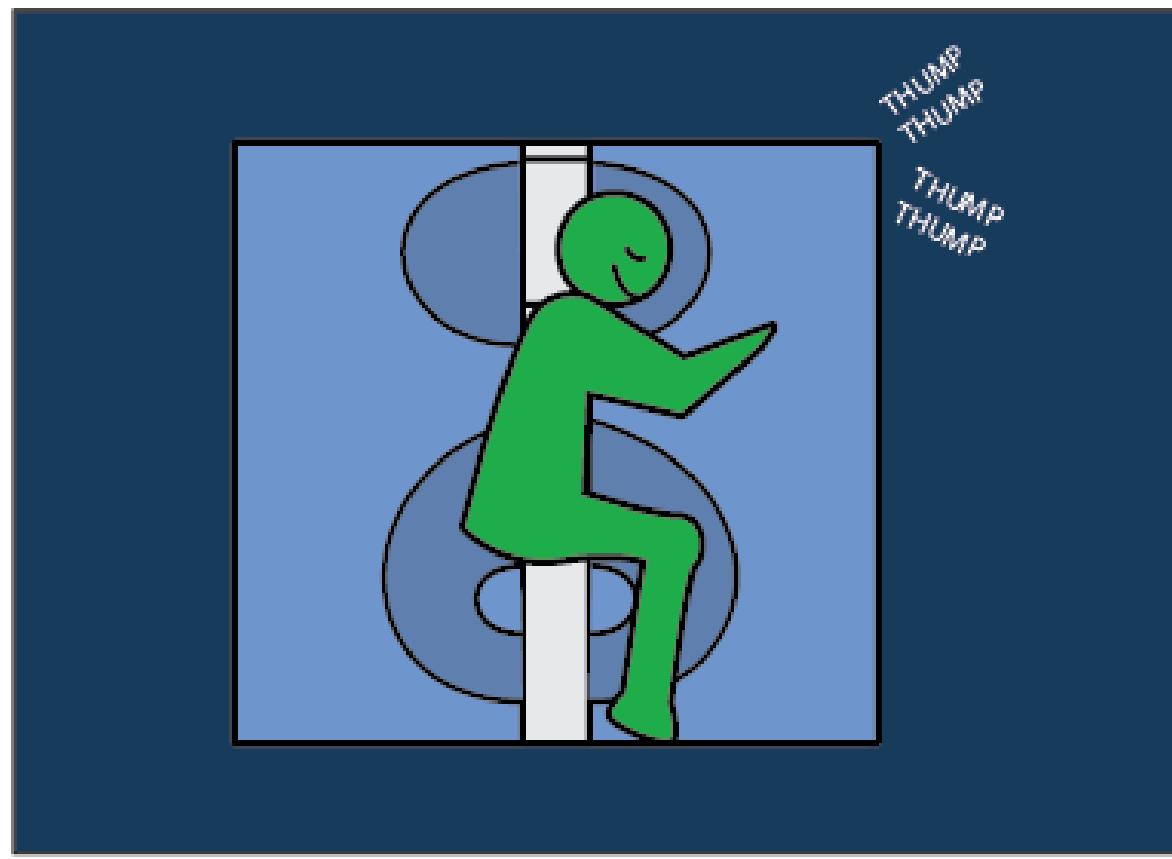

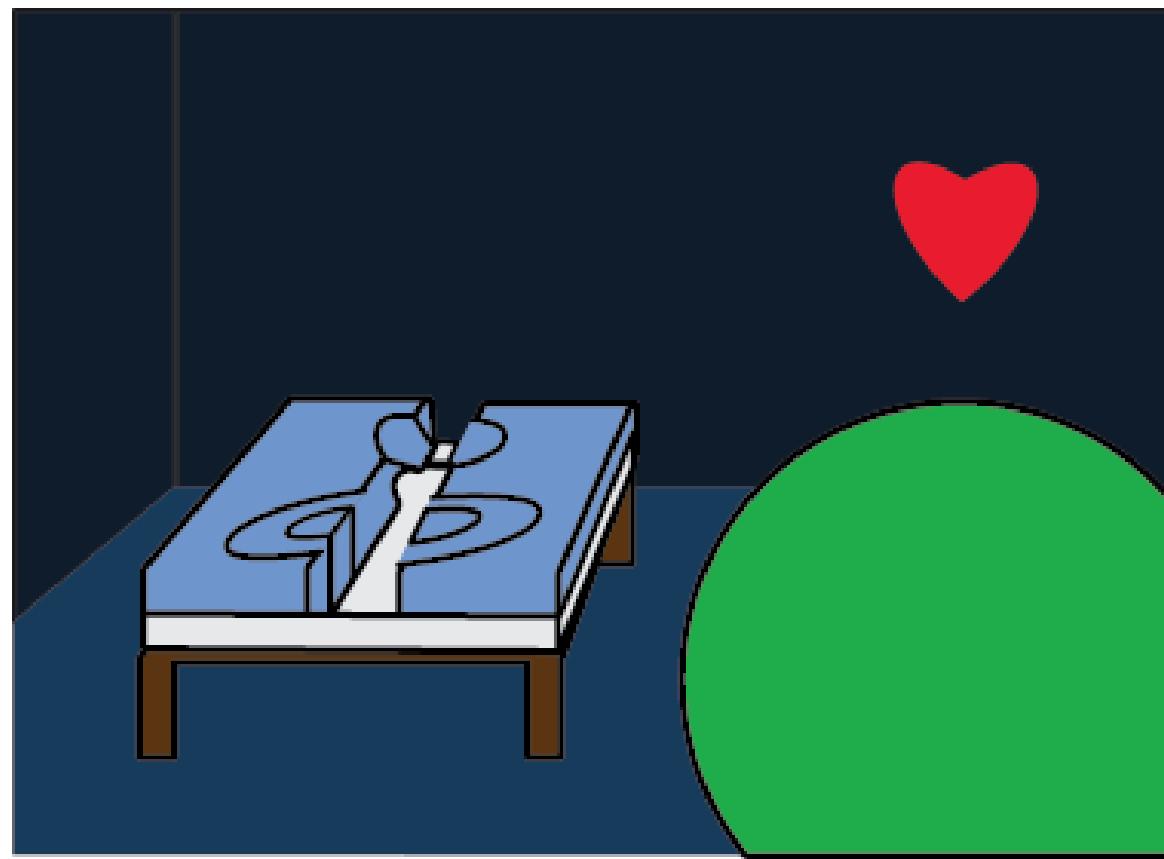

I want to make it a little bit more comfortable.

Fin.

THANK YOU!
